OUR STORY

WE ARE NETBRYD

We are a technology and security company with offices in Paramaribo, Suriname, and Georgetown Guyana. We specialize in physical-, cyber security, and smart communication solutions for corporations, hospitality, and medical institutions. We also provide automation solutions for the Hospitality Industry.

We have more than 12+ years of experience in information & technology, network installation & security, and communications. We design and offer consultancy for physical, network & cyber security, and communications. With our solutions, we guarantee efficient business operations.

We understand that every business is unique and requires a tailor-made solution. This is why we invest in getting to know your business. As dedicated experts, we will manage all your Security & Technology needs.

OUR VISION

To be the most innovating, customer and result driven information & technology company, by delivering quality products and services and by constantly working towards the ultimate customer satisfaction

OUR MISSION

As a services provider in the information and technology industry, we deliver dedicated and reliable services and support. We advise our clients with a highly motivated and trained team of professionals and add value to their services, so they can serve every customer to the highest standard.

OUR CULTURE

WE ARE COMPETITIVE

As a provider of network and security solutions, we are ambitious in our search to find ways to better serve our customers. In the process, we never forget that they are the real judge of our performance.

WE ARE COMMITTED

Our solution-driven approach helps us to establish long-lasting relationships with our clients to support them every step of the way. We are an understanding and strong partner dedicated to our customers' success.

WE ARE COMPETENT

The work we have done over the years enables us to approach new ideas with acquired wisdom.

**CYBER
SECURITY
SOLUTIONS**

ACCESS MANAGEMENT

Maintaining information and system security can be difficult, especially as organizations grow both in personnel and systems. Managing who has access to which applications, folders, networks, modules, services, locations, etc., in other words, access control, can be a fundamental challenge for IT and security teams.

Enforcing access control policies is made significantly easier with our workflow management tools like access control systems.

When using a Netbryd's powerful access management system, user access authorization requests can be granted or refused in a standardized, repeatable way across the entire organization.

NETWORK SECURITY

Security measures for protecting a computer network from intruders, including both wired and wireless (Wi-Fi) connections.

Netbryd will simplify and guide you through your cyber security journey. In the evolving world of cloud services, remote working and big data, Netbryd partners with you to place cyber security right at the heart of your strategy.

With access to leading technical expertise, our teams help identify your cyber security strategic priorities by planning the right steps and solutions to mitigate potential cyber threats.

With our managed services and security expertise, we bring security to every layer of your business, and can monitor and protect you from threats 24×7 so that you have the confidence to grow.

Security

CLOUD & APPS SECURITY

In the era of cloud transformation, customers face an increasingly complex environment and need the right strategy to safeguard their infrastructure as a service (IaaS), platform as a service (PaaS), and software as a service (SaaS) services.

Strengthen your cloud security posture

Optimize the configuration of cloud services with extensive assessment tools.

Defend against evolving threats

Protect cloud workloads and apps from threats with the help of leading security research and threat intelligence.

Control access to critical cloud apps and resources

Enforce real-time access controls using built-in risk assessments and contextual information.

Secure every step of the development lifecycle

Safeguard the entire app development, deployment, and operations lifecycle directly within the standard developer workflow.

INTERNET OF THINGS (IOT) SECURITY

Security in IoT is the act of securing Internet devices and the networks they're connected to from threats and breaches by protecting, identifying, and monitoring risks all while helping fix vulnerabilities from a range of devices that can pose security risks to your business.

To provide protection in the age of IoT, network operators need to have the tools and skills to:

1. See and profile every device on the network, to understand what IoT devices are being deployed
2. Control access to the network, both connecting to the network and determining where devices can access
3. Monitor the devices on the network to ensure that they are not compromised and to take automatic and immediate action if they are

Netbryd provides these capabilities through our Network Access Control solutions, Fully integrated into the Security Fabric, our solutions delivers the visibility, control, and automated response needed to provide security in a world of IoT devices.

BUSINESS CONTINUITY/ DISASTER RECOVERY

Business continuity is a business's level of readiness to maintain critical functions after an emergency or disruption.

Tools and procedures for responding to unplanned events, such as natural disasters, power outages, or cybersecurity incidents, with minimal disruption to key operations.

Business continuity threats to your business can arise from various angles, as technical malfunctions, malicious actors, or natural disasters. They all pose operational and reputational risks. Prepare your organisation with a targeted and effective solution that keeps you up and running - even when the unexpected happens.
