OUR STORY

WE ARE NETBRYD

We are a technology and security company with offices in Paramaribo, Suriname, and Georgetown Guyana. We specialize in physical-, cyber security, and smart communication solutions for corporations, hospitality, and medical institutions. We also provide automation solutions for the Hospitality Industry.

We have more than 12+ years of experience in information & technology, network installation & security, and communications. We design and offer consultancy for physical, network & cyber security, and communications. With our solutions, we guarantee efficient business operations.

We understand that every business is unique and requires a tailor-made solution. This is why we invest in getting to know your business. As dedicated experts, we will manage all your Security & Technology needs.

OUR VISION

To be the most innovating, customer and result driven information & technology company, by delivering quality products and services and by constantly working towards the ultimate customer satisfaction

OUR MISSION

As a services provider in the information and technology industry, we deliver dedicated and reliable services and support. We advise our clients with a highly motivated and trained team of professionals and add value to their services, so they can serve every customer to the highest standard.

OUR CULTURE

WE ARE COMPETITIVE

As a provider of network and security solutions, we are ambitious in our search to find ways to better serve our customers. In the process, we never forget that they are the real judge of our performance.

WE ARE COMMITTED

Our solution-driven approach helps us to establish long-lasting relationships with our clients to support them every step of the way. We are an understanding and strong partner dedicated to our customers' success.

WE ARE COMPETENT

The work we have done over the years enables us to approach new ideas with acquired wisdom.

**PHYSICAL
SECURITY
SOLUTIONS**

FACILITY SECURITY

Having a facility security plan requires some initial investment, but it saves you money and trouble in the long run.

It's important to pay attention to three vital areas: Building, space and information protection.

Safety starts from the perimeter. Ensure that your space is secure even before people enter it. For extra protection, video surveillance and good lighting is recommended.

Reliable access control is also essential to the physical security of your space.

It can serve as an authentication and identification tool if you enforce mobile access control.

An integrated security system will protect the space from a break-in and works in tandem with a cloud-based access control system.

As a digital security measure, make sure that each user's firewall is configured properly and that you install a VPN service on users' computers to ensure encryption of all data. Computer security locks and private lockers will help protect your employees devices when they leave the space.

SURVEILLANCE

This is one of the most important physical security components for both prevention and post-incident recovery. Surveillance, in this case, refers to the technology, personnel and resources that organizations use to monitor the activity of different real-world locations and facilities.

The most common type of surveillance is closed circuit television (CCTV) cameras that record the activity of a combination of areas.

The benefit of these surveillance cameras is that they are as valuable in capturing criminal behavior as they are in preventing it.

As a leading security camera solutions provider, Netbryd can meet your security needs in different scenarios.

Our IP cameras renders high-quality images even in low illumination environment while featuring smart functions based on video content analytics, and minimizing bandwidth and storage. The most important business value of them is to provide excellent performance at an affordable price.

Our processes help protect applications operating on-premises and in the cloud.

That is why we built security into applications at the design stage, with considerations for how data is handled, user authentication, and all other aspects for the workflow.

ACCESS CONTROL

The key to maximizing one's physical security measures is to limit and control what people have access to sites, facilities and materials.

Access control encompasses the measures taken to limit exposure of certain assets to authorized personnel only.

Our sophisticated access controls solutions involve a technology-supported approach. ID card scanners and near-field communication (NFC) ID cards are methods of physical authentication that security teams can use to verify the identities of individuals entering and exiting various facilities.

Netbryd provides a tailored, local resource for the servicing and maintenance of all Door Hardware, Entrance Systems and Interior Glass Systems. When you call us, our highly educated staff will offer expert advice.

SMART ACCESS

Netbryd access control solutions provide security reassurance for everyone on site while protecting assets and equipment. Netbryd access control solutions integrates with the business technology ecosystem including management and security software (BMS) and other third-party systems.

We provide seamless, keyless experiences with mobile technology and expertise in applying wireless electronic locking solutions in the most secure way.

At Netbryd our goal is to give customers the products they need to exceed the challenges they face. It's why we go the extra mile to provide innovative access control solutions using the latest technologies that fit any type of building requirement in any market.

Mechanical Key management is costly, unsecure, and a hassle, that is why we provide you with effective and time-saving management solution of all stand-alone and online access points and applications in one package.

PERIMETER SECURITY

Up until now, highly secure buildings and facilities have known the need for security lighting. But, it was always too expensive with the only option being high-voltage post-light legacy systems. So we at Netbryd together with our partner provide the first dedicated perimeter fence illumination system.

CAST Perimeter® has been designed to integrate seamlessly and enhance any security system, CCTV, or modern intrusion detection systems; while delivering unmatched benefits and value.

SECURITY TESTING

We, at Netbryd, focus on incorporating physical security penetration testing for your organization. This is a part of our **cybersecurity services** that will help you to improve your security controls.

Our expert team will assess all the physical security controls to find out the loopholes.

Our physical security testing service will investigate the kind of security control services you use to protect your IT environment. It includes technical controls like Access control, CCTV cameras, procedural, personnel controls like visitor records, security guards, and effective staff training programs.

Physical penetration testing services provide real-world trials of how effective your company's physical security methods are when it comes to protecting your data, equipment, and personnel.
